## **News**

### **T22T Tuvalu –update September 21**

T22T currently on air (0840z) with 4 stations so far. Bad news: 160, 80, 40m likely not possible thus far (from 4 different hotels) – noise level on those bands is S9+60dB. Team will try to find solution tomorrow (Sept 22). More updates later..

### **ZD9W Trsitán da Cunha -update September 20**

MV Lance is approximately half way to Tristan da Cunha. Apparently, Yuris had seasickness during the first days of the trip. Now he feels OK. Internet is available for short text messages every 2nd day for a short time.

### **ZL7IO Chatham Islands –update September 21**

Yesterday was a very calm day here and we managed to erect the 80m vertical. We had to deviate from the original plan. The inner tube joiners we planned to use did not work as expected. They bend with the top weight. We used a lighter fishing rod on the top now and managed to reach 15m total height (11m aluminium tube). The top guy ropes got three meters of wire attached as a capacitive head. The bad news is the noise level on 80m – sticks out from all other bands with an S7 noise level (otherwise it is whisper quiet here).

I really struggle to dig out the stations from the noise. Most CW QSO's on 80 were with AS/NA/OC. But, in FT8 I managed 50 EU's during their grey line. Our friends in HL/JA asked to call around 3547 kHz as they have limited access areas on 80m. I'm happy to accomodate this and will be tonight on 3547 kHz FT8 FH mode. Again call above 1000 Hz in FT8 or I can't pick you!
